# Future Ready Homes – Support for your DIY retrofit

Want to save energy, carbon and money in your home?  
Want to make your home a healthier and more comfortable place to live?

Want to do it yourself?

## Our offer:

- An energy assessment of your home, and an action plan setting out recommended improvements with indicative costs.
- ‘Green Doors’ events where you can visit the homes of other householders who have done retrofit works, and learn from their experience.
- Support and advice from MEA’s expert panel of structural engineers, architects, green building experts, and heritage professionals.

# Future Ready Homes

Marches Energy Agency is looking to work with local contractors who can see the opportunity in retrofit.

## Demand for retrofit

- Householder demand for whole house retrofit is rising - but they can't find the contractors to do the work.
- Retrofit work isn't dependent on Government funding that may be withdrawn – there's a large 'Able to Pay' market.
- Retrofit makes sense in so many ways – it cuts energy costs, cuts carbon emissions, and increases comfort.
- Green mortgages from high street banks are readily available, so householders can cashflow the works.
- Working in the 'Able to Finance' market means you can avoid the expenditure of time and money on PAS 2030 certification.
- Whole house retrofit is a high value service which could boost your business.

## Training in retrofit

Retrofit has got to be done right to minimise the risk of future problems. We have fully funded and part funded places available on the Green Register's excellent Futureproof Essentials training course, which you can do online.

## Support every step of the way - MEA can help you:

- Get training
- Get on our trusted contractor framework
- Get ongoing support and advice from our expert panel of structural engineers, architects, green building experts, and heritage professionals
- Get ongoing support and advice from your fellow contractors through our dedicated WhatsApp group
