

# SAVE OUR SHROPSHIRE CIO

NET ZERO BY THREE ZERO

- **Become a Climate Champion with Save Our Shropshire and make a difference in your community.**
- **Lead action to reduce people's impact on the climate.**

## **Who are we?**

Save Our Shropshire is committed to bringing about behaviour change in peoples' lifestyles through education (not just 'chalk and talk') to reduce their impact on the planet. We have been running courses for councillors, organisations and householders for two years.

We have just been awarded Platinum status by the Carbon Literacy Project, which puts us amongst the leading organisations in the country in this area for delivering education and behaviour change.

## **What will you receive?**

We will provide you with free education on our one-day course which will enable you to be certified carbon literate. We will do this by refunding your fee after six months of working with us. We can also finance your attendance at a Train the Trainer course, using our grant funding, assuming you are a suitable candidate.

## **What will you do?**

You will lead your community in organising events, arranging talks, developing education, having pub quizzes, arranging electric vehicle charging, organising solar panel provision, and setting up repair cafes – whatever your local community needs and wants.

You should work with local parish councils in your area to help them develop their plans into action and spread the actions required to combat greenhouse gas emissions. We will align you with the councils which we educate.

If you want to train others, then you will also be paid to deliver our householder courses across Shropshire, which will increase the funds we can distribute.

## **What qualities do you need?**

You may already be active in this space. But all you need is a strong commitment to acting on climate change and a pragmatic and realistic attitude to making people change their behaviours.

You should be capable of organising events with enthusiasm. You should be happy in front of an audience in a hall or over Zoom.

You should be able to listen, not argue, persuade through calm conviction and not force climate mania down peoples' throats. You will champion the action against climate change!
